FORMATION OF ENERGY SERVICES MARKET IN UKRAINE

Summary

Improving the energy efficiency of the residential sector is associated with energy saving, which is impossible without the introduction of their energy modernization, taking into account the latest technologies aimed at improving the efficiency of energy resources in order to save money on their payment. All this is possible due to the operation of energy service companies, which are actively implementing energy modernization of residential buildings to ensure rational energy conservation.

The purpose of the article is to consider the peculiarities of the formation of energy services market in Ukraine, to identify their impact on improving the energy efficiency of the residential sector and to develop a set of measures aimed at their development and implementation.

The interpretation of terminological units referring to energy efficiency measures is considered and carried out: "energy service activity", "energy service market", "energy service company", "energy service contract". The understanding of energy saving as an activity that is to ensure reliable and uninterrupted operation of the energy system, in the implementation of a set of energy-saving measures aimed at improving energy efficiency. The authors highlighted the relationship between energy service as a special form of energy saving, in which the costs of measures are borne by the energy service company and the energy service contract, which regulates the list of implemented energy-saving measures, the payback period of the project, the amount of energy savings resources and income sharing from energy savings between service company and customers.

Keywords: energy saving, energy services, energy modernization, energy resources.
